Application No: 736

Somers Conservation Commission

9/1/20

In 2006 I made an application to contain water within my property so that I could have a partially functioning lawn and maintain my property appropriately. It was approved at that time and a pond area was created to accomplish this. Over time this pond has filled with vegetation and degraded from its original dimensions. I would like to have the pond restored for its original intent, although deeper and with a higher berm, so that water will drain to this area of the lawn more effectively again and the remaining yard will not flood as often as it does now. As with the original plan, this will not impact any areas off-site. In fact, this will help to keep the water within my yard and not spread to my neighbor.

If there are any questions or any additional information needed to approve this, please let me know.

Thank you.

Attn: Joanna Shapiro

Hi Joanna,

As a follow up to my letter of 9/1/20, I am attaching the original drawing from when the pond was created in my yard. I am looking for this same basic structure for the pond, just with a slightly higher berm so that will hold more water to make the rest of my yard more useable, as originally intended.

Enclosed please also find the fee, as required.

Please let me know if anything more is needed. Thanks again for your help.
