

## **Town of Somers Radio Bid**

### **Addendum #1**

#### **Question #1**

1. During our discussions yesterday I understood that the Town was negotiating with Crown Castle to do the installation of the Town provided antenna and heliax which differs from the description on page 2 of 2 of the repeater specifications. The option was stated to provide the cost of a mount for the Crown Castle tower and the associated installation. Given that, what is the diameter of the monopole?

#### **Answer to Question #1**

You may recall that at yesterday's meeting there was a question raised regarding chain mounts for the tower. You may also recall that we said the bidder would not be making the installation on the tower, as we were leaving that to Crowne.

As I stated yesterday, the mast or pipe on which the dipole antennas are mounted is to be provided by the successful bidder. Crowne and their subcontractor shall be responsible for providing and installing the hardware required to mount the antenna mast on the tower.
